## **ANNOUNCEMENT OF ENVIRONMENTAL PERFORMANCE**

At Goldservice we are concerned about the repercussion that our activity may have on the environment, that is why we have implemented an environmental management system based on ISO14001:2015.

Based on our environmental management system, we carry out many actions to minimize the environmental aspects derived from our activity, as well as their impacts. For that:

- We control all the consumption of natural resources on which we can act.
- We correctly control and manage the dangerous and non-dangerous waste derived from our activity, delivering the dangerous ones to authorised managers and the non-dangerous to municipal managers.
- We communicate to all our suppliers the environmental requirements that Goldservice demands in order to be able to work together, requesting for it the conformity on the part of our suppliers. We also request evidence of correct environmental management to our suppliers who have an environmental impact.
- Every year we study the evolution of consumption, waste generation and significant environmental aspects setting environmental objectives of reduction, minimisation, substitution, etc.. to become more and more respectful with the environment.

By 2018, Goldservice had set itself the goal of reducing the consumption of active ingredient in our products by at least 3%. We are proud to report that by the end of 2018 we had managed to reduce consumption and we have achieved our goal.

We can also communicate that we have reduced consumption of paper, inks, plastic containers and fuel.

**Goldservice is currently** considering the following actions:

- We will keep continue digitalizing the working system in order to minimize paper consumption as much as possible.
- We will study and analyse fuel consumption in detail. We will focus on optimizing the routes of our technicians. Taking into account the purchase of new vehicles to make them more environmetally friendly.
